## Introduction

Most online system or website have a registration form which allow users to enter their personal data to register as system users and our project is to create this registration form .

## Specification

- The project should be in one page
- The registration for should be divided into at least three section .
- The registration for should be like a wizard so each section has a next button lead to next section
- The registration form should contain a progress bar which show registration progress depending on the finished section forms
- The project is a group project and each group should contain at least 3 and max 5 members
- The project should be fully uploaded on github and should work in github pages
- Each group member should have a specific part and should declare what she / he have done
- The presentation should not take more than 20 minutes
- Each group member should have a part in the presentation and should explain about the difficulties that she/he had and how she/he did solve it
- The project will be divided into milestones and each milestone has points
- Each team member will have different points in each milestone depending on her/his work
- The project deadline is at 03.02.2020 and any late project will lose points
- No outsource libraries and also no javascript
- The some of the points are 70 points and we will have an exam after the project with 30 points so the sum of the project and the exam is 100 points for HTML , CSS, SCSS module

---

## Milestones:

1. Structured and organized HTML 10 points
2. Structured and organized CSS 10 points
3. Using SCSS to generate CSS 10 points
4. Git and GitHub using to collaborate with team members and solving the conflict 10 points
5. Nice and custom design UI, UX 10 points
6. Teamwork 10 points
7. Extra addition so I would like to see something amazing, something could not be found on other designed 5 points
8. Time management 5 points

**BEST REGARDS**
